Integrating a Zoho Creator application with another Zoho service using connections and APIs

Event Registration Form — Zoho Calendar Integration Use Case

Name: Vaideeshwari K

Roll No: 241401121

1. Aim

To integrate a Zoho Creator event registration form with Zoho Calendar using microservice connections, conditional workflows, and Deluge scripting.

2. Procedure

Phase A: Navigating to the Connection Panel

1. Log in to your Zoho Creator developer account and open the active Event Registration & Participant Management application.

2. In the left navigation panel under Develop, click **Microservices** to access the centralized integration environment.

3. Choose **Connections** and use **Pick & Create** to configure the Zoho Calendar service connection.

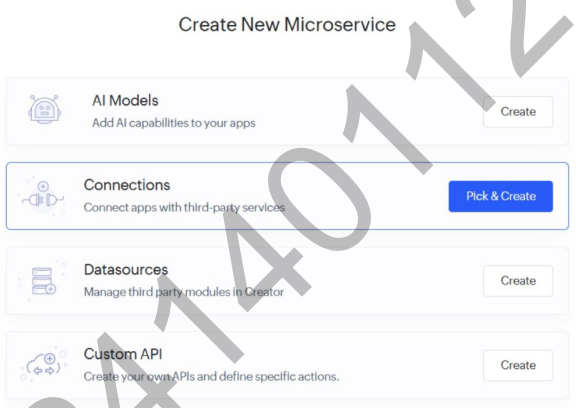

Figure 1. The Create New Microservice panel with Connections selected using Pick & Create.

Phase A: Creating the Zoho Calendar Connection

4. Select Zoho Calendar and create the connection using the link name **zoho_calendar_connection**.

5. Set Authorization Access to Administrators only, select Quick connect (Zoho credential), enable All Actions if available, and click Create and Authorize.

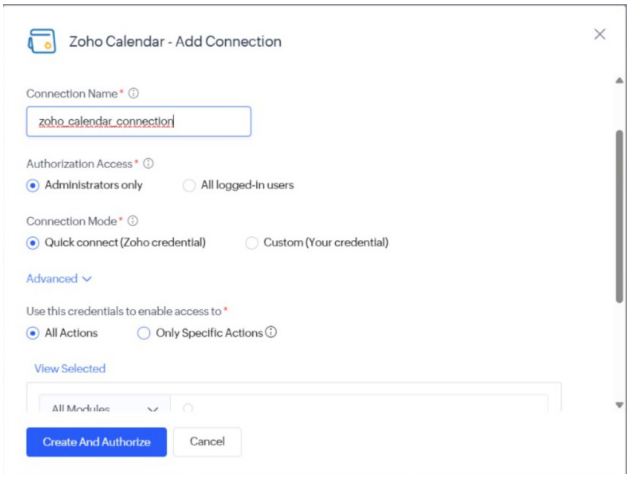

Figure 2. Zoho Calendar — Add Connection dialog with the connection name and authorization options.

Phase B: Verifying Scopes and Application References

6. Open the Zoho Calendar Connection asset to inspect its security and permission settings.

7. Confirm that the required permissions include Create Calendar, Create Event, and Get all Calendars.

8. In the Connection Access matrix, switch on access for Event Registration & Participant Management if required.

Phase C: Setting Up Conditional Rules

9. Return to the Event Registration application, open the Event_Registration_Form workflow area, and create a form workflow named **Sync_To_Zoho_Calendar**.

10. Configure the trigger as **Created** → **Successful form submission**.

11. In the action builder, change the run setting from Always to **on condition**. Select **Agree_To_Code_Of_Conduct**, choose the equals comparison, and set the value to the checkbox choice “I agree to the event code of conduct”.

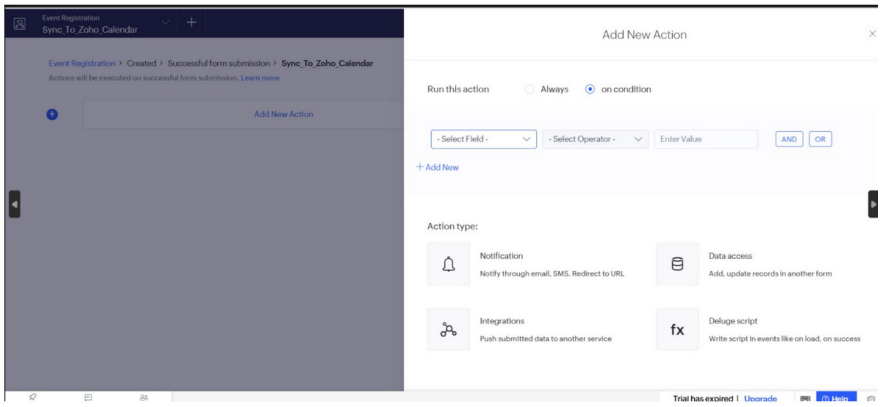

Figure 4. Add New Action panel with the condition builder and available action types.

Phase D: Compiling the Deluge Script Code

12. Select **Deluge script (fx)** from the action type grid to open the embedded Deluge editor.

13. Map the registration email, event track, preferred session date, and preferred session slot into an event data map. Use **invokeurl** with the authorized connection link name **zoho_calendar_connection** to call the Zoho Calendar API.

14. Click Save to validate and save the script. Verify the API response and test with a sample registration.

3. Output & System Verification

The integration connection is configured in Zoho Creator. The following screenshot shows the Microservices dashboard with the Zoho Calendar connection and its current connection status.

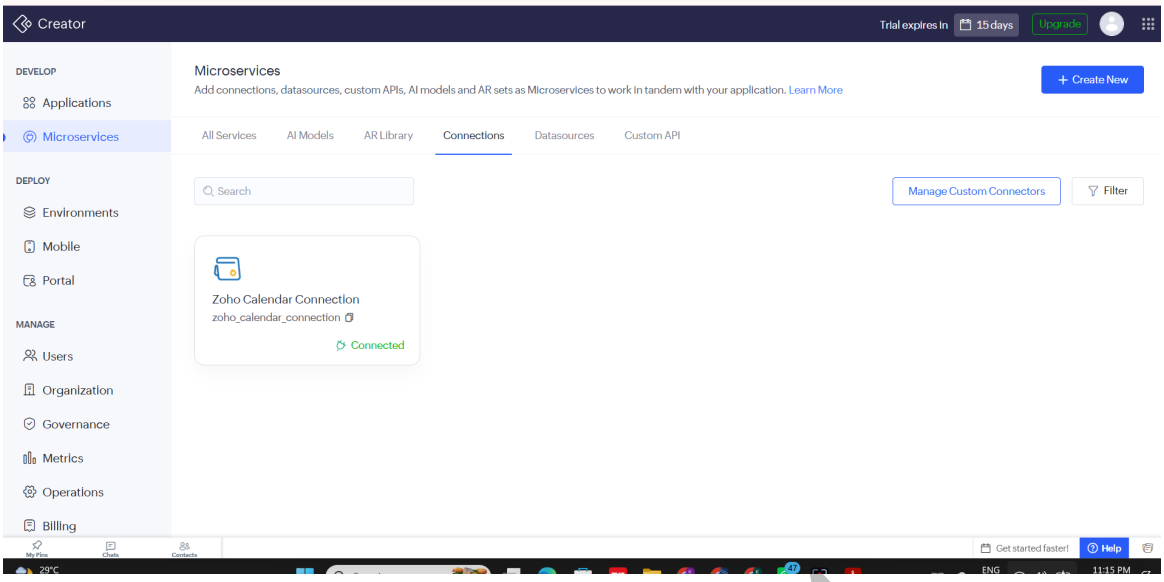

Figure 6. Current Microservices Connections dashboard showing zoho_calendar_connection with Connected status.

Verification checklist

- Connection link name: **zoho_calendar_connection**
- Connection status: **Connected**
- Workflow name: **Sync_To_Zoho_Calendar**
- Trigger: **Created** → **Successful form submission**
- Condition: **Agree_To_Code_Of_Conduct** matches the agreement choice
- Deluge action: calls Zoho Calendar API through the configured connection

4. Conclusion

This experiment demonstrates how to integrate a Zoho Creator application with another Zoho service using a microservice connection, a conditional workflow, and Deluge scripting. The workflow is designed to use event-registration details to create a corresponding Zoho Calendar event after the required condition is satisfied.
