Aim

To design and develop an Event Registration Management application in Zoho Creator by creating two Kanban reports and a dashboard using UI Builder. The application organises event registration requests based on Event Category and Participant Type, allowing the organising committee to easily view and manage registrations.

Procedure

1. Log in to Zoho Creator and create a new application named Event Registration Management.

2. Create the form Event_Registration_Form.

3. Add the required fields using the Basic Fields available in Zoho Creator: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

4. Organize the form into four sections: Participant Details, Contact Details, Event Details, and Scheduling & Acknowledgement.

5. Configure field validations such as mandatory fields, email validation, phone validation, number range of 1–5 seats, and restriction of past dates.

6. Submit five sample event registration requests to create sample records.

7. Create the first report named Event_Registration_Report.

8. Select Kanban as the report format and group the columns by Event Category.

9. Create the second report named Participant_Type_Request_Report.

10. Select Kanban as the report format and group the columns by Participant Type.

11. Create a custom page using UI Builder and name it Event_Registration_Dashboard.

12. Add the two Kanban reports to the dashboard.

13. Arrange and save the dashboard so that the organising committee can view registrations category-wise and participant-type-wise.

14. Preview/publish the application and verify that the submitted records are displayed correctly in both reports and the dashboard.

Reports and Dashboard Overview

The application is built on a single form, Event_Registration_Form, which stores every event registration request along with the participant's details. Two Kanban-style reports are created on top of this form so that the committee can view the same records grouped in different ways, and both reports are then combined on a single custom page (Event_Registration_Dashboard) built with UI Builder for a consolidated, at-a-glance view.

24140121

Component	Format / Grouping	Purpose
Event_Registration_Report	Kanban, grouped by Event Category	Lets the committee see how many registrations fall under each event category (e.g. Technical, Cultural, Sports, Workshop).
Participant_Type_Request_Report	Kanban, grouped by Participant Type	Lets the committee see registrations organised by who raised them — Student, Faculty, or Staff — as separate columns of cards.
Event_Registration_Dashboard	UI Builder custom page	Brings both Kanban reports together with supporting charts and summary widgets (approvals pending, registrations declined, seats requested, purpose of participation) on one page.

Explanation of Screenshots

The following screenshots show the Event_Registration_Dashboard as rendered in Zoho Creator after the sample event registration requests were submitted, along with the Kanban report grouped by Participant Type.

1. Dashboard — Number of Seats Requested

The top section of the Event_Registration_Dashboard shows the Number of Seats requested across submissions. The first widget is a bar chart plotting how many registrations asked for 2, 3, or 5 seats, and the second is a line/trend widget plotting the Number of Seats against the Purpose of Participation (department event, inter-college event, workshop attendance, competition entry, and cultural fest), letting the committee quickly spot which purpose is associated with the largest seat demand.

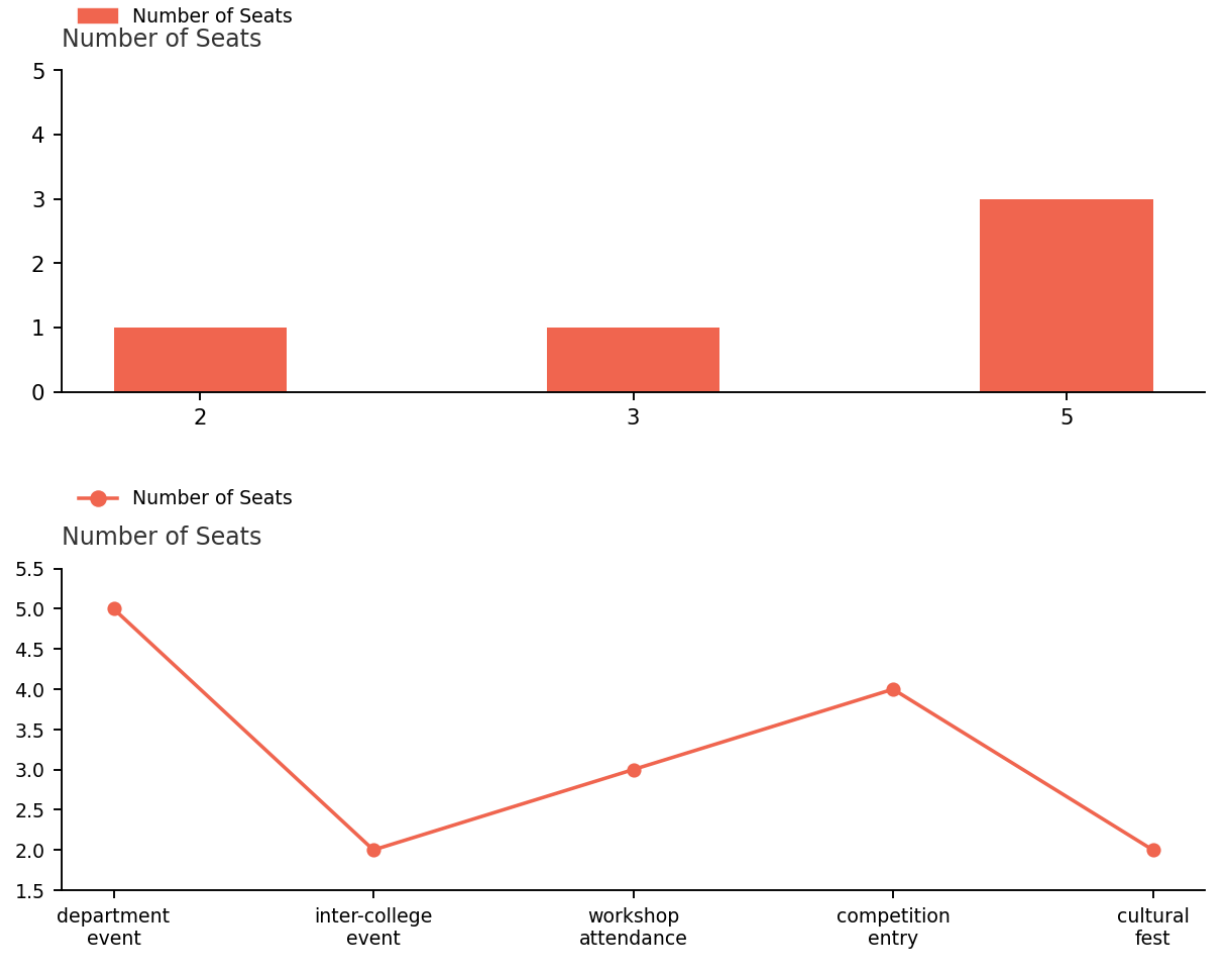

Fig. 1 — Dashboard: Number of Seats by request and by purpose of participation

2. Dashboard — Category-wise and Timeline Widgets

Scrolling further down the dashboard shows the Purpose-of-Participation trend continuing at the top, followed by a radar chart that plots the Number of Seats requested against each Event Category — Technical, Cultural, Sports, and Workshop — and a semi-donut widget that breaks down registrations by their Preferred Event Date.

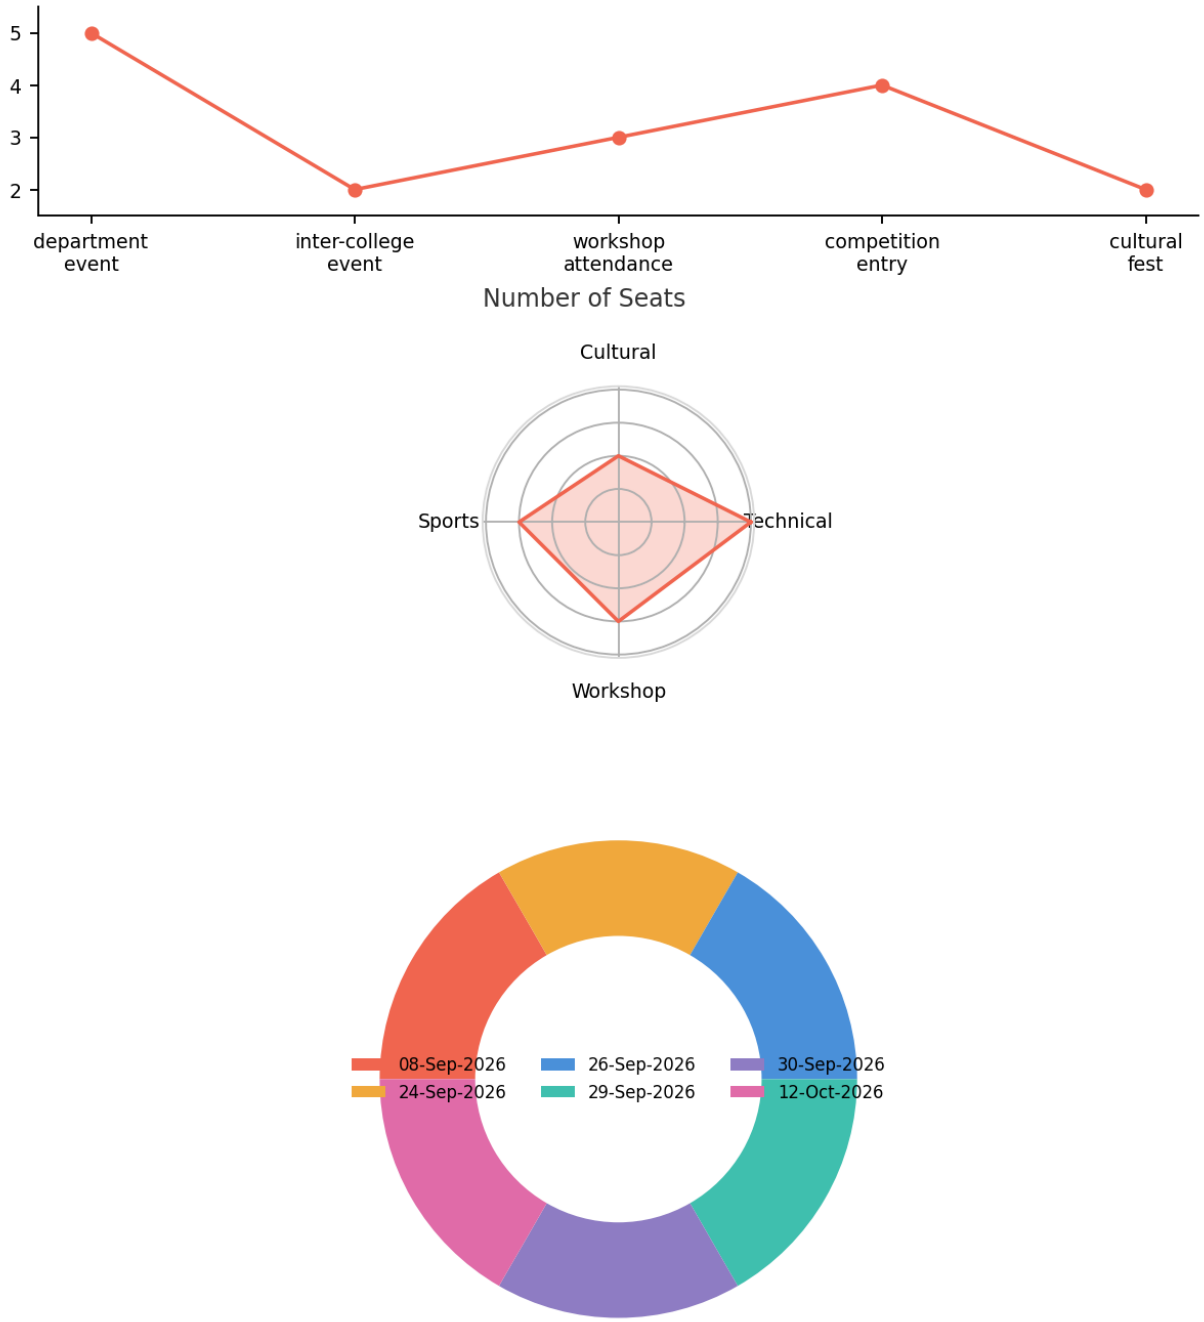

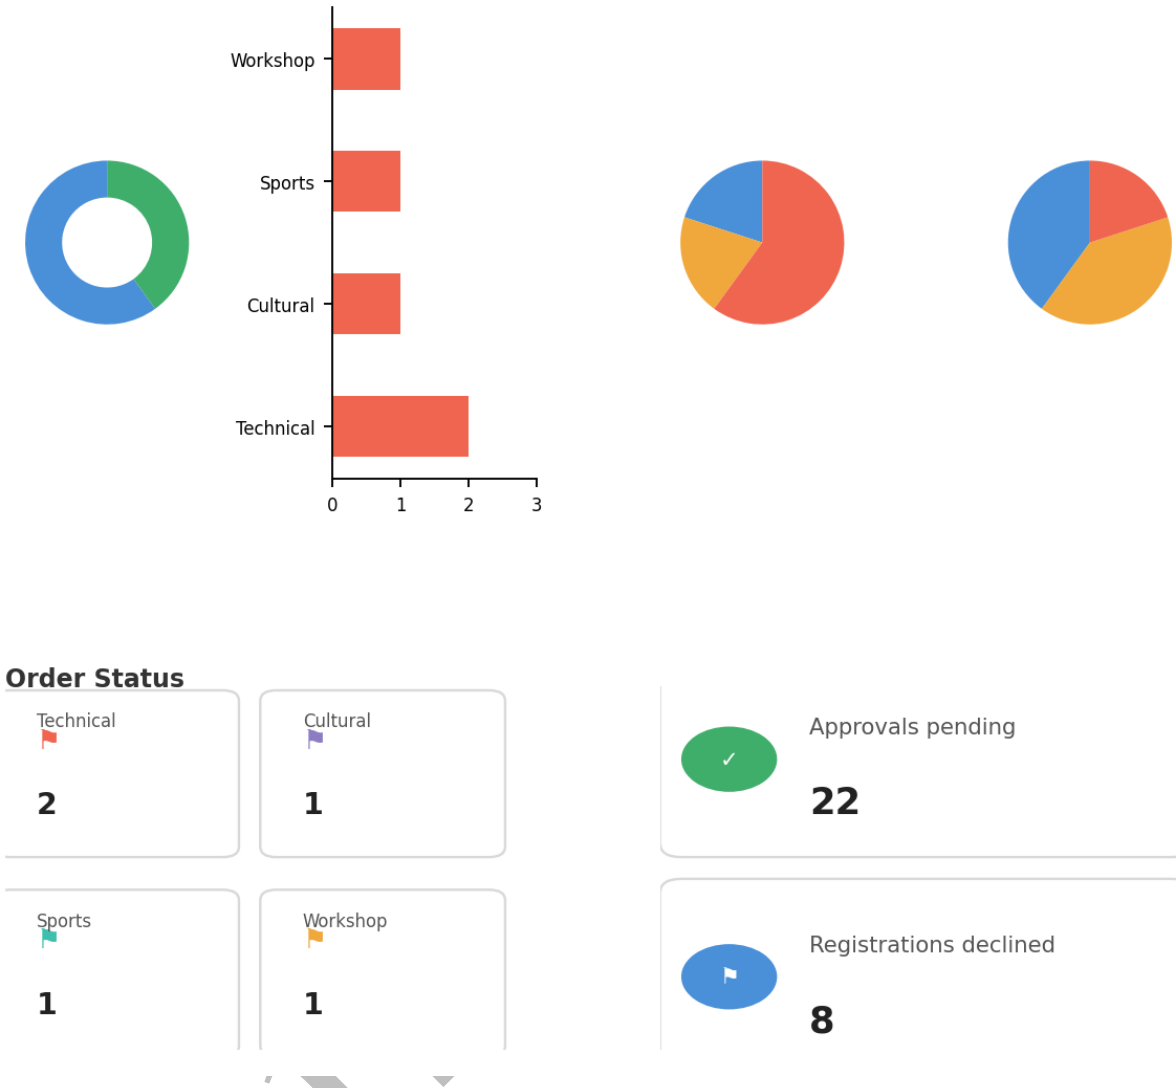

Fig. 2 — Dashboard: category-wise radar chart and event-date distribution

3. Dashboard — Distribution Charts, Status Cards, and Participant Records

The lower part of the dashboard shows a donut chart comparing the two purpose values (department event vs. inter-college event), a bar-style summary of registrations by Event Category, and two pie charts — one splitting registrations by Number of Seats (2 / 3 / 5) and one splitting registrations by Participant Type (Student / Faculty / Staff). Alongside these, an Order Status panel lists the count of pending registrations per event category, and two status cards report the number of Approvals pending (22) and Registrations declined (8). The All Event Registrations table beneath the charts lists each participant's Name, roll number, Participant type, Email, and Contact number, confirming that the underlying Participant Profile data feeding the dashboard is captured correctly.

Name	Roll Number	Participant type	Email	Contact number
Arjun Mehta	23414189	Student	arjun.m@example.com	+91 90000 12345
Priya Rao	22CSE045	Faculty	priya.rao@example.com	+91 98765 43210

Fig. 3 — Dashboard: distribution charts, status cards, and the participant records table

4. Kanban Report — Grouped by Participant Type

The Event_Registration_Report, when switched to Kanban view and grouped by Participant Type, arranges the submitted registrations into columns headed Student, Faculty, Staff, and Deleted & Others. Each card shows the registering participant's name and roll/register number, for example “Arjun Mehta – 23414189” under Student and “Priya Rao – 22CSE045” under Faculty, giving the

committee an immediate, drag-and-drop friendly view of who has registrations in progress under each participant type.

Output

The Event Registration Management application was successfully created in Zoho Creator with:

- Event_Registration_Form containing all 13 Basic Field types.
- Event_Registration_Report in Kanban format, grouped by Event Category.
- Participant_Type_Request_Report in Kanban format, grouped by Participant Type.
- Event_Registration_Dashboard created using UI Builder, containing both Kanban reports.
- Five sample event registration records displayed successfully.

The application provides a structured and user-friendly way for the organising committee to view, categorize, filter, and manage event registration requests.
